# Polar Grid

This paper will detail  
the work of the  
Polar Grid project

# Polar Grid

The Polar Grid project is the designing and building of the hardware and software for Polar Grid, which supports data analysis and simulations for Polar Science.

# Polar Grid

Polar Grid is a National Science Foundation (NSF) Major Research Instrument (MRI) funded partnership of Indiana University and Elizabeth City State University.

# Key Areas

The Polar Grid implementation and development focuses on the following key areas:

- Field data collection system to be taken with the Polar Science researchers as they collect data.
- A base camp 64-core cluster, allowing near real-time analysis of radar data by the polar field teams.
- An educational videoconferencing Grid to support educational activities.

# Key Areas

continued...

- A large 17 Teraflops cluster to be integrated with the NSF-funded TeraGrid, to serve the polar research community in final processing of data and supporting simulations. This is split between IU and ECSU to support research and education training respectively.
- The implementation of new improvements to the speed and capabilities of ice sheet models, and implementation of web portals to make the data, data products, and resources easily accessible to the polar research community.
- Is seen to add value to the business

- Purposed as a computer center

# Building Plans

## Server Room

# General Server Specs

Duplicate “Base Camp” Server from Polar Grid

- 1 - Management Node  
(RedHat Enterprise based)
- 16 - Quad-Core Worker Blades  
(64 Total Nodes)
- 4 - SATA based storage array units  
(32 TB total storage)
- 4 - UPS battery backup units
- 1 - KVM switch and console

*Image from “Base Camp”  
Cluster and Storage Array  
at University of Indiana*

# Electrical Power Specs

- Cluster(s) Requirements
  - – Total power 200amps
  - – 208V (3 phase)
  - – ~50kW
- UPS
  - – 80kVA
  - – 480V (3 phase)
  - – Modular for Growth

# Clusters

## PG Ilulissat (64cluster/48TB disk)

- A) ~11KW
- B) 20 amps
- C) (2) L6-30 (locking 30

## Lower 48 Cluster

- A) ~6TF : iDataplex
- B) 600 Cores
- C) ~35KW
- D) 208V (3 Phase)
- E) ~500lbs
- F) ~37,000 BTU's
- G) (5) IEC309 (60 amp)
- H) 208V (3 phase)
- I) ~3000lbs
- J) 120,000 BTU's

# Cooling

- A) 320, 000 BTU/HR
- B) 1 Ton = 12,000 BTU/hr
- C) 26 Ton CRAC requirement (really a 30 ton CRAC)
- D) \* Consider the future expansion possibilities
- E) 208V 3-Phase

# Security

Campus Police

- Alarms to police
- Remove top glass
- 1-2 Security Cameras
- Doors
- How do we bring in large equipment into Room?

# TeraGrid Connection

Generalized Network Connection

- 64-node Grid Cluster with web-based portal using Globus Toolkit
- Public IP accessible through ECSU firewall
- User submits jobs through the web portal

**TeraGrid**<sup>™</sup>

# TeraGrid Networking

## Network Connection

- Inside the firewall on its own vlan subnet and with an ssh port on it
- Increase pipe to 10G

# Proposed Timeline

Action Item	Percent Complete	Due Date
Planning Stage	50%	April 08
Flooring	0%	May 08
Electrical Upgrades	0%	May 08
A/C Installation	0%	June 08
Fiber Installation	0%	June 08
Cluster Delivery	15%	July 08
Conversion to Condor - G	0%	October 08
Portal Connection	15%	March 09

# Design

- Bigger Door to bring equipment (Tall Double Door)
- Do we have enough space?
- Concern with windows
- Door access to outside
- Seal room for efficiency and heat
- Seal ceiling at the top

# ECSU's Polar Grid Lab

**TeraGrid™**

# Polar Grid Lab

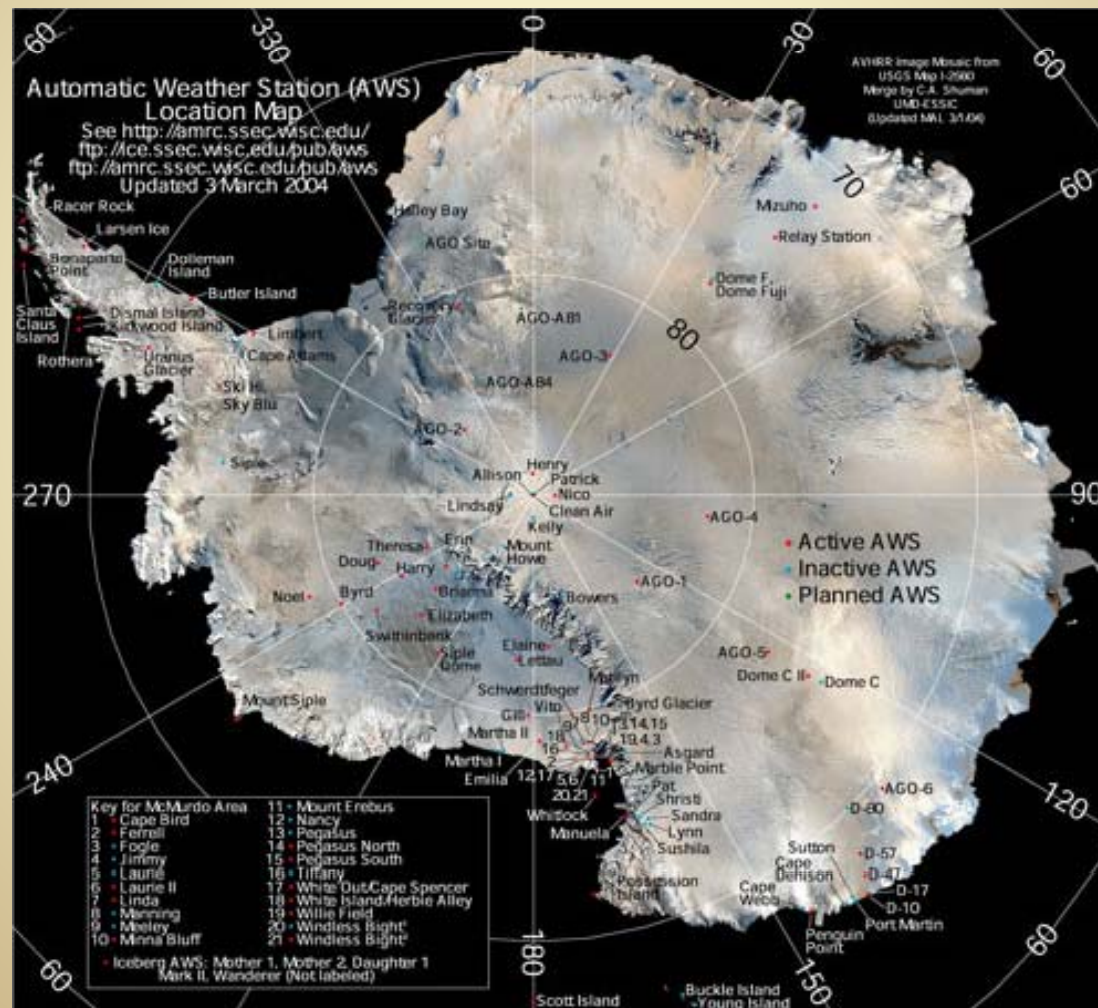

- Mac OS X Public IP accessible through ECSU firewall
- Ubuntu Linux
- Windows XP

## Additional Software

- Desktop Publishing
- Ubuntu Linux
- Word Processing
- Web Design
- Programming
- Mathematical Applications
- Geographic Information Systems (GIS)

# Center for Remote Sensing of Ice Sheets

CReSIS

**CReSIS**  
Center for Remote Sensing of Ice Sheets

# CReSIS

- National Science Foundation Science and Technology Center established in 2005
- Mission –
  - Develop new technologies and computer models to measure and predict the response of sea level change to the mass balance of ice sheets in Greenland and Antarctica
  - Provide students and faculty with opportunities to pursue research in a variety of disciplines
  - Collaborate with scientists and engineers in the US and abroad
  - Make meaningful contributions to the ongoing, urgent work of addressing the impact of climate change

# What is CReSIS?

**CReSIS**  
Center for Remote Sensing of Ice Sheets

# CReSIS

CReSIS is comprised of six partner universities, with the headquarters located at the lead institution, the University of Kansas.

Elizabeth City State University

Haskell Indian Nations University

The Ohio State University

The Pennsylvania State University

University of Maine

In addition to this core group, CReSIS collaborates with several international institutions and industry partners.

ECSU's CERSER lab contributes to the:

- Satellite Measurements Research Team
- Data Products & Modeling Research Team
